## **PART 3 EXECUTION**

### **3.1 DELIVERY**

- A. Deliver to locations listed on bid schedule FOB
- B. Stockpiles: Gravel stockpiling method for is specified for each delivery location. The method will be one of the following:
  - 1. Method 1: Stockpile by butting loads – Build stockpiles at designated locations. Supplier uses end dumps, end dumps and pups, or belly dumps to haul material. Butt end dump loads one against the other in such a manner as to occupy as small a total stockpile area as possible. If the supplier elects to use belly dumps or pups, he must supply equipment to keep the stockpile pushed up to cover an area no larger than a stockpile area produced by an end dump. If Engineer is not satisfied with the stockpiling, supplier reshapes the stockpile to an acceptable configuration. If UDOT personnel reshape the stockpile, the cost of reshaping is deducted from the contract.
  - 2. Method 2: Stockpile by supplier-furnished loader – Build stockpiles at designated locations. Supplier uses end dumps, end dumps and pups, or belly dumps. Supplier places each load and load is "bucked up" using a supplier-furnished loader and operator. Stockpiles occupy as little space as possible and are bucked up to a uniform 10-foot height. If Engineer is not satisfied with the stockpiling, supplier reshapes the stockpile to an acceptable configuration. If UDOT personnel reshape stockpile, reshaping cost is deducted from the contract.
  - 3. Method 3: Stockpile by state forces shaping pile – Build stockpile at designated locations. Supplier uses end dumps, end dumps and pups, or belly dumps. State forces shape stockpile.
